ERGON 

About Ergon

We're family owned and operated, brought together more than six decades ago in the petroleum industry's service sectors. Driven by the values of hard work, customer service, reliable supply and quality products, we've grown steadily and strategically over the years to become a well-diversified organization.

Our companies are engaged in a wide range of operations, including sophisticated crude oil processing, marketing naphthenic and paraffinic specialty oils, producing and marketing specialty asphalt products, manufacturing and marketing road maintenance products and machinery, transporting and terminaling raw materials and refined products, propane marketing, oil and gas exploration and real estate development—among other undertakings. Our horizons have expanded since we first began, but our mission remains the same: **Meet needs. Support families. Serve customers.**

We attribute our progress and achievements to one ingredient: our people. Through the efforts of forward-thinking, responsive employees and the integrated relationships of our company's many components, Ergon has built a synergistic company in the fullest sense of the word.

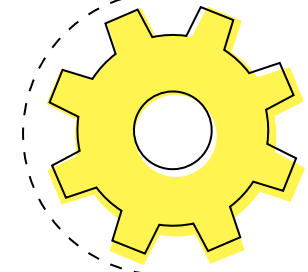

About Ergon's Corporate Engineering & Maintenance Divisions

From concept to design to execution, our Corporate Engineering and Maintenance Divisions work to ensure the efficient operation of Ergon facility projects and maintenance across the country.

Groundbreaking Work

Ergon's Co-Op Engineering Program aims to identify and mentor the cream of the crop of upcoming engineers. Co-Ops are afforded the opportunity to plan and manage a wide variety of work within Ergon's engineering disciplines.

Mechanical & Civil Engineering

Responsibilities within this dual discipline include systems design, cost estimation, project justification, contractor review and construction management for projects associated with Ergon's industrial divisions. Co-Ops are given individual assignments and work alongside full-time staff to maintain these responsibilities.

#Dreamjob

Engineering Co-Ops contribute real work to real projects and are treated as equal team members. This means access to some of the same benefits as full-time employees and more!

Benefits Include:

- Private Office Space
- Competitive Pay
- Travel & Networking Opportunities
- Company-Provided, Furnished Apartment

Along with these benefits is the chance to connect and build relationships with a diverse group of people that extend beyond day-to-day business communication into a real family culture. After all, family and loyalty are founding principles of Ergon.

The Co-Op Experience

Ergon's Engineering Co-Ops are assigned projects within their first few weeks at Ergon. Through hands-on experience, they are able to learn and retain necessary skills for effectively moving forward in their careers.

"I have learned how to manage money for projects. Being able to develop something from an idea, present it to the Operations group, and execute the project from A to Z has been a great experience."

-Matt Dantin, Third-Term Co-Op

"I chose Ergon because it seemed like I would be allowed more responsibility than I would anywhere else. They bring you in and you get to help with real projects; they don't put you on the back burner. Because of this, you get a lot out of the experience and are able to learn even more about what you're taught in school."

-Miranda Snell, Second-Term Co-Op

"Working at Ergon definitely doesn't get boring. Everyone enjoys what they are doing. The work is really exciting; the projects are so different and are spread across the country. Ergon is also very good about doing things outside of work, like going to the Mississippi Braves baseball games, so employees can get to know each other."

-Trey Stennis, First-Term Co-Op

"My time at Ergon has been rewarding; it is a good environment to learn how to manage in the real work force. As you move forward in the program, the projects you are responsible for become more and more detailed. Of course you can ask questions and they [Ergon] are more than happy to help you out, but you are fully responsible for the projects assigned to you."

-Tyler Long, Third-Term Co-Op

"The most unique aspect of the Co-Op Program at Ergon is that your job description does not change much when you start full time. The most significant change between a Co-Op and a full-time Engineer is the increase in responsibility warranted by the size and amount of projects being managed simultaneously. I am grateful for my Co-Op experience at Ergon and look forward to the years to come working with such great people."

-Cade Sherman, Ergon Project Engineer & Former Co-Op

Ergon's family of engineers provides you with the support and experience you need to successfully create your own career opportunities.

Choose your discipline and get started on the blueprint for your future today.
