How to Connect to the Wireless Guest Network

Follow these steps to join the guest Wi-Fi network on your phone, tablet, or laptop. Replace the placeholder network name and password before sharing this guide.

1. Open Wi-Fi settings

On your device, open Settings and select Wi-Fi (or tap the Wi-Fi icon in the quick settings/menu bar).

Make sure Wi-Fi is turned On.

2. Find the guest network

Wait for nearby networks to appear, then select the guest network:

wireless_guest

If you do not see it, move closer to the building or refresh the network list.

3. Select the network

Tap or click the guest network name, then choose Connect.

4. Enter the password

When prompted, enter the guest network password exactly as shown, including capital letters, numbers, and symbols.

Guest network password: %%erg2radio%%

Then tap Join or Connect.

5. Confirm you are connected

A Wi-Fi symbol should appear at the top of your phone screen or in the bottom-right corner of your computer. Open a web page to confirm internet access.

If asked to accept terms or sign in through a browser page, follow the on-screen prompts.
